Re: K. Hovnanian Co. of North Jersey, Inc.  
JMS Project #92050

Dear Mr. Schrier:

I have attached a copy of a laboratory analytical report for two (2) samples analyzed for TCLP lead. These samples were collected from the stockpiled soil represented by sample 73669 as reported in our original waste classification request dated November 5, 1992.

The analytical results for the two samples are 2.4 and 0.6 mg/l, each well below the hazardous waste regulatory level of 5.0 mg/l.

If you have any questions regarding the sampling or the analytical results, please call me at your convenience. Your expedited review of this data would be greatly appreciated.

Sincerely,

Michael McGowan  
Senior Geologist
